

# Controls Test #1 Notes

KE

PE

$$EL: \frac{d}{dt} \left( \frac{\partial L}{\partial \dot{q}} \right) - \frac{\partial L}{\partial q} = F$$

$$L = KE - PE = \left[ \sum_{i=1}^n \frac{1}{2} m_i \dot{v}_i^2 + \frac{1}{2} \omega^T J \omega \right] + \left[ P_{gravity} + P_{springs} \right]$$

## Getting KE

- 1) Find generalized coords
- 2) Define inertial coord frame
- 3) Find position vectors of each body
- 4) Take time der. to get velocity
- 5) Add rotational terms
- 6) Combine all bodies & linear & rot

## Eq. Forms

State Variable:  $\dot{x} = f(x, u)$   
 $y = g(x, u)$

---

State Space:  $\dot{x} = Ax + Bu$   
 $y = Cx + Du$

## Jacobian Linearization

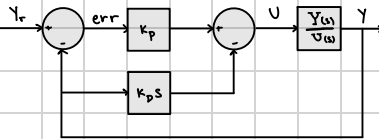

$$A = \begin{bmatrix} \frac{\partial f_1}{\partial x_1} & \dots & \frac{\partial f_1}{\partial x_n} \\ \vdots & \ddots & \vdots \\ \frac{\partial f_n}{\partial x_1} & \dots & \frac{\partial f_n}{\partial x_n} \end{bmatrix}$$

$$B = \begin{bmatrix} \frac{\partial f_1}{\partial u_1} & \dots & \frac{\partial f_1}{\partial u_m} \\ \vdots & \ddots & \vdots \\ \frac{\partial f_n}{\partial u_1} & \dots & \frac{\partial f_n}{\partial u_m} \end{bmatrix}$$

## Feedback Linearization

$$\dot{x} = f(x, u_F + u_{ctrl}) \Rightarrow Ax + Bu_{ctrl}$$

## Modified PD controller

$$Y_{ss} = \frac{b_p K_p}{s^2 + (a_1 + b_s K_p)s + (a_0 + b_0 K_p)} Y_r(s)$$

real

$$s^2 + 2\xi\omega_n s + \omega_n^2$$

desired

## Desired Closed Loop

$$t_v = \frac{2.2}{\omega_n} \quad \text{if } \xi = 0.707$$

$$t_v = \frac{1}{2} \frac{\pi}{\omega_n \sqrt{1 - \xi^2}}$$

## Code

```
import sympy as sp
from sympy import eye, sin, cos, diff, Matrix, symbols, simplify
from sympy.physics.vector import dynamicsymbols
from sympy.physics.vector.printing import vlatex
from IPython.display import Math, display
```

$t, m = \text{symbols}('t, m')$

$z = \text{dynamicsymbols}('z')$

$v = P.\text{diff}(t)$

$LHS = \text{simplify}((L.\text{diff}(q)).\text{diff}(t) - L.\text{diff}(q))$   
 $\text{display}(\text{Math}(\text{vlatex}(LHS)))$

$A = \text{svf.jacobian}(\text{states})$

$B = \text{svf.jacobian}(\text{inputs})$

$$TF = \text{simplify}(C @ (s.I - A).inv() @ B + D)$$
